(a) CG PE 5 nm slit pore, side view

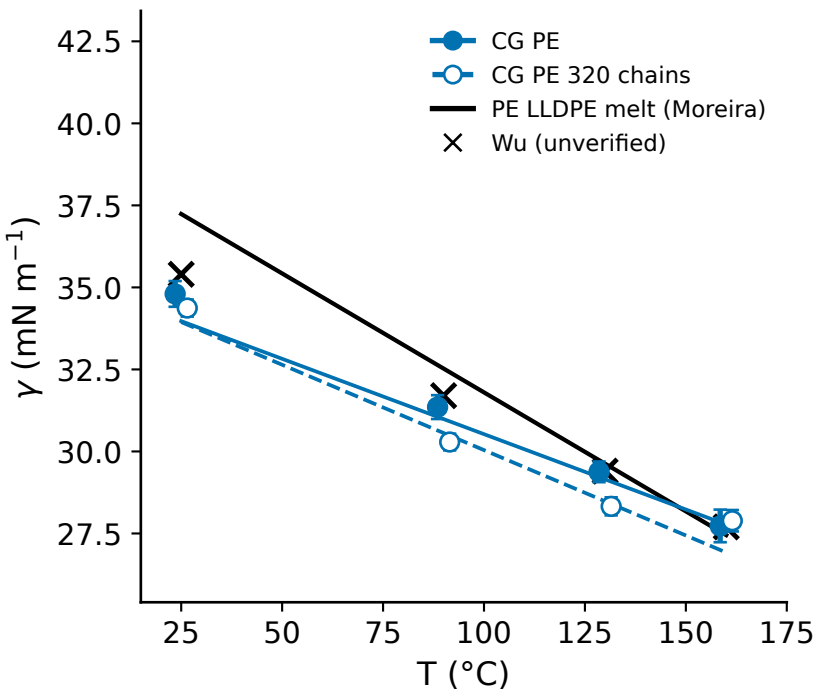

z →, gap shaded; periodic images grey; 25 °C hold end

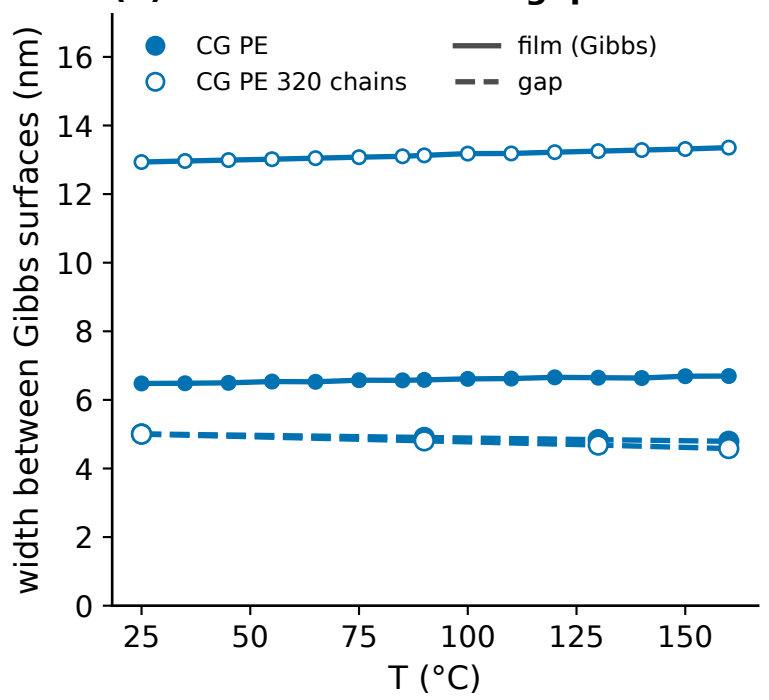

(b) Density profile $\rho(z)$ vs bulk

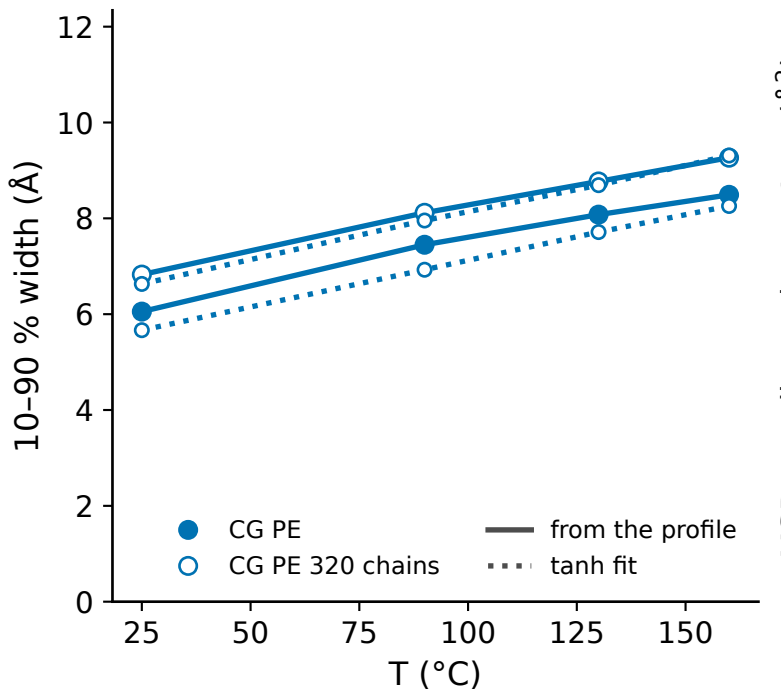

(c) Surface tension $\gamma(T)$

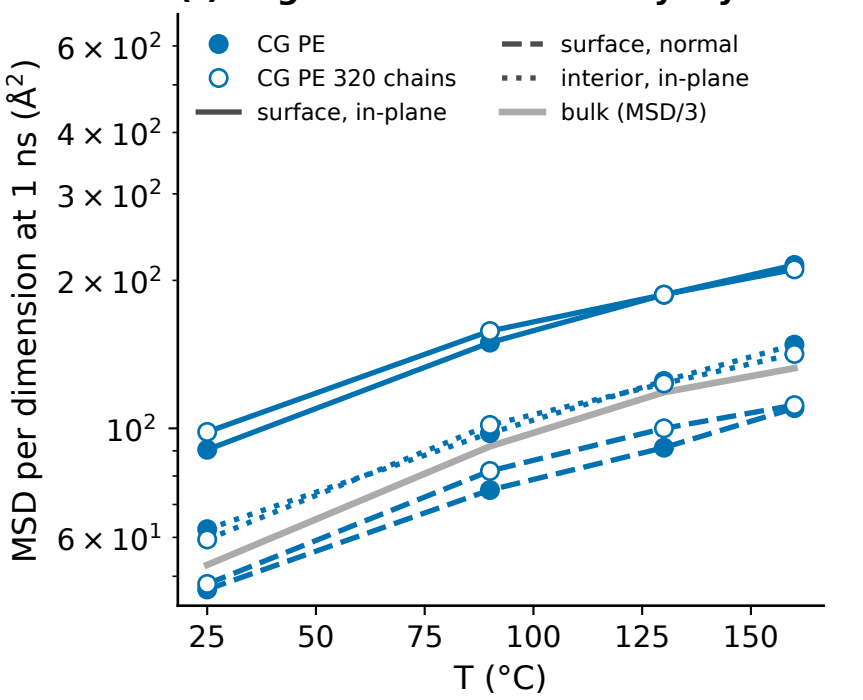

(d) Film thickness and gap width

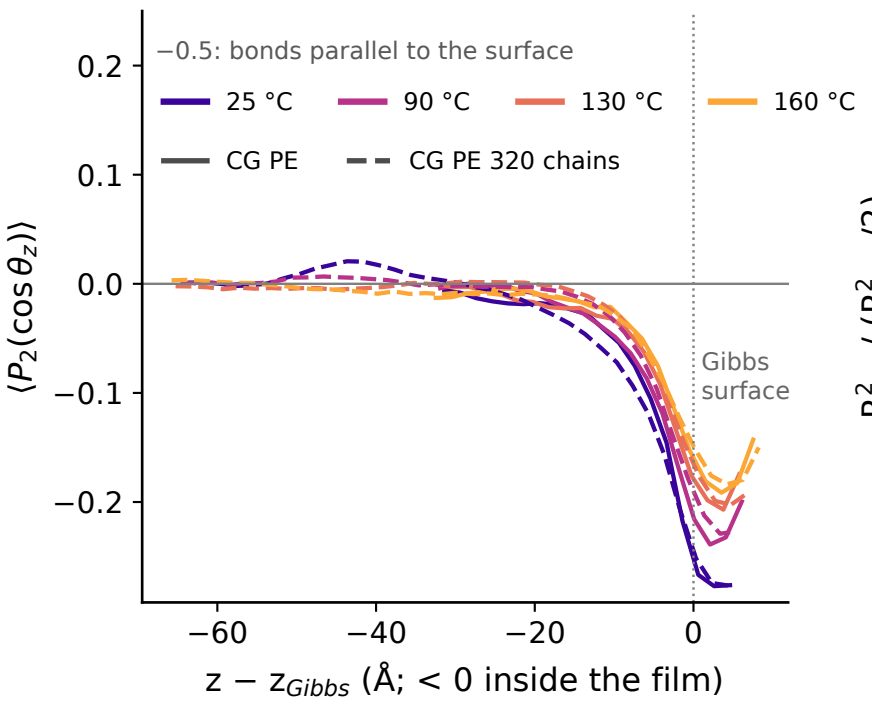

(e) Interfacial width (10–90 %)

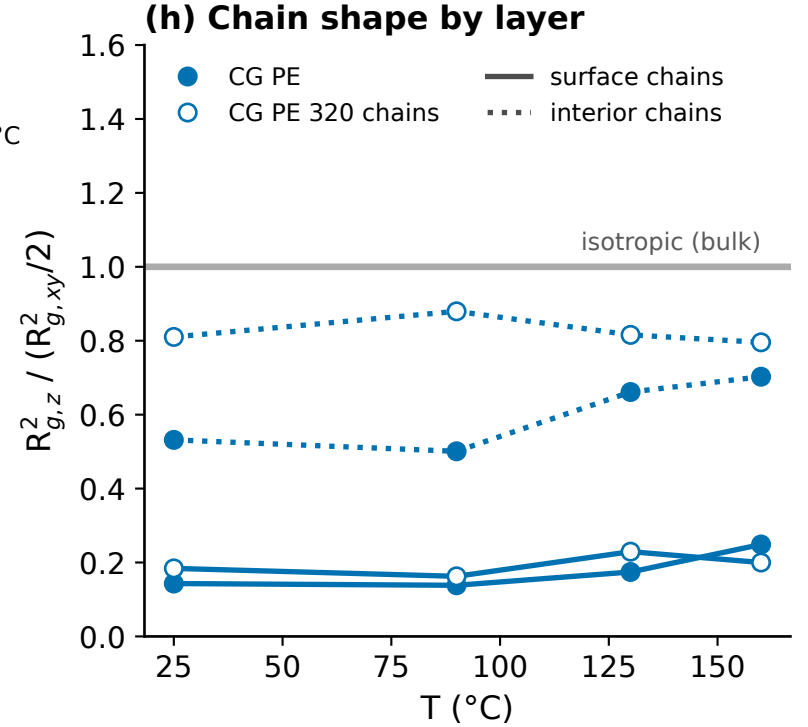

(f) Segment MSD at 1 ns by layer

(g) Bond orientation $\langle P_2(\cos\theta_z)\rangle$

(h) Chain shape by layer

(i) Surface excess energy e_s
