
(a) Bulk sweep: density vs time
hold 25 °C
hold 90 °C
hold 130 °C
hold 160 °C
density (g cm^{-3})
CG PE (thinned trace)
block means ± SEM
analysis windows
sweep time (ns, model time)
(b) Hold SEM vs block length (density)
CG PE holds
25 °C
90 °C
130 °C
160 °C
SEM of the hold mean (10^{-5} g cm^{-3})
100 ps blocks (D55)
SEM from n block means
reported SEM
block length (ns)
(c) 500 K chain relaxation: end-to-end vector ACF
$\langle \mathbf{R}_{ee}(0) \cdot \mathbf{R}_{ee}(t) \rangle / \langle R_{ee}^2 \rangle$
1/e
CG PE
CG PE C1500
UA PE
UA iPP
1/e time
lag (ns, model time; CG real time ≈ 4.07×)
(d) Slit pore: surface tension running mean per hold
T
25 °C
90 °C
130 °C
160 °C
γ (mN m^{-1} per surface)
CG PE 5 nm pore
CG PE 320 chains 5 nm pore
lines: running mean; symbols: blocks
time in hold (ns, model time)
